Alerting Abstract US A1

NOVELTY - The method involves causing a web server to request authentication from another web server. A user is allowed to access a restricted access domain in the web server from a client terminal based on an authentication result provided to the former server by the latter server. The former web server delivers an information request received from the latter server to the client terminal.

DESCRIPTION - An INDEPENDENT CLAIM is also included for an authentication apparatus.

USE - Used for providing web pages to a certain group of users.

ADVANTAGE - The method permits only users in the certain group to access the restricted domain in the web servers, with reduced task for the users and reduces the burden regarding management of the web servers.

DESCRIPTION OF DRAWINGS - The drawing shows a comparison of a process flow of an authentication method.

13Authentication requesting function

22Web browser

30Master web server
